Application Summary

The CardDemo application is a credit card transaction management system that handles the processing, maintenance, and reporting of financial transaction data. At its core, the application manages transaction type reference data, providing the classification framework necessary for categorizing and processing credit card transactions. The system includes batch processing capabilities for extracting transaction reference data from a DB2 database to support daily Transaction Report generation, as well as batch maintenance utilities for updating and managing the Transaction Type reference table. The application operates against a DB2 database environment, with dedicated components for database initialization and ongoing maintenance operations. Overall, CardDemo serves as a comprehensive back-end solution for administering credit card transaction data, combining data extraction, reporting, and reference data maintenance functions within a structured batch processing architecture.

Summary of each file

File Name	One sentence summary
cbl/COTRTUPC.cbl	This program is part of a credit card management system (CardDemo), operating within the administrative business layer responsible for maintaining reference data used to classify financial transactions.
jcl/CREADB21.jcl	This JCL job (CREADB2) is designed to create and initialize the CARDDEMO database within the DB2 subsystem (DAZ1), which appears to be a credit card transaction processing application.
cbl/COBTUPDT.cbl	This program operates within a card transaction management system (CardDemo), serving as a batch maintenance utility for the Transaction Type reference table.
cbl/COTRTLIC.cbl	This program is part of a credit card management system (CardDemo), operating within the administrative business layer responsible for maintaining transaction type reference data.
jcl/TRANEXTR.jcl	The TRANEXTR job extracts transaction reference data from a Db2 database to support daily Transaction Report generation for the CardDemo application.

File Name	One sentence summary
jcl/MNTTRDB2.jcl	This JCL job, **MNTTRDB2**, is designed to perform batch maintenance operations on a DB2 transaction table within the CardDemo application.
